

PRODUCT DESCRIPTION

Terra by STENI

LASTING EXPRESSIONS

AREA OF USE

Terra by STENI is a robust panel designed to be used as exterior ventilated cladding for foundation walls. This foundation panelling is suitable for all types of structures. Terra by STENI is particularly well-suited for areas where there is a lot of moisture.

ORIGIN

Terra by STENI is manufactured by STENI AS in Larvik, Norway. STENI AS has developed and manufactured unique façade panels since 1965.

COMPOSITION

Terra by STENI is a fibreglass reinforced stone composite panel with a core of crushed natural stone.

SURFACES

Terra by STENI has a rough front surface of crushed natural stone with up to a 25-year functional warranty. Choose from several stone surfaces, all with grades from 1–3 mm. The base panel is uniformly coloured. The edges and back of the panel are untreated. The base colour of the base panel is based on environmentally friendly pigments that have limited UV resistance. Therefore, the base colour will gradually become lighter over a period of time, about 1 year, and then stabilize at a final level.

FORMAT

Terra by STENI is 5 mm thick.

Production width is 1195 mm. Standard formats are 1195 x 2395 mm, 595 x 2395 mm and 595 x 1195 mm.

UNIQUE PROPERTIES

Terra by STENI is a highly resistant material that maintains its technical properties under extreme climatic conditions. These panels have excellent resistance against a variety of chemicals. Unique properties include:

- ✓ Natural surface
- ✓ Exceptional scratch resistance
- ✓ High durability with up to a 25-year functional warranty
- ✓ Elastic and bendable
- ✓ Robust with high impact resistance
- ✓ Water impermeable and stable in humid and cold climates
- ✓ Easily washable surface that can withstand high-pressure washers up to 100 bar.

ENVIRONMENT

This product is classified by Byggvarubedömningen.

At STENI AS, we manufacture our products in Norway, using green energy from hydropower plants.
